

BANNAWIT CHAICHOMPHU

Website Developer | Full Stack Developer

Pathum Thani, Thailand 1200 | 099 - 034 - 1134 | tiwsuphawit@gmail.com | GitHub : github.com/Flame-Bannawit

Military Status: Deferred (Available for immediate and continuous employment)

PROFESSIONAL SUMMARY

Computer Engineering graduate with hands-on experience building and deploying production-ready full-stack web applications independently — from system design to cloud deployment. Proficient in Next.js, TypeScript, Node.js, and modern DevOps practices. Demonstrated ability to integrate third-party APIs (Stripe, Google Maps, Gemini AI, LINE OA) and deliver real-time, scalable web systems. Strong self-learner with a developer's mindset for clean code, performance, and UX.

EDUCATION

Bachelor of Engineering in Computer Engineering **GPAX: 3.07**

Rangsit University | [2565 - 2569]

Related Coursework: System Analysis and Design, Computer Operating Systems, Database Systems / Database Management, Software Engineering, Data Structures and Algorithms

TECHNICAL SKILLS

- Frontend: Next.js, React, TypeScript, JavaScript (ES6+), Tailwind CSS, HTML5, CSS3, Vite.js, Vue.js
- Backend: Node.js, Express.js, Go (Golang), Python, RESTful API Design, WebSocket
- Database: MySQL, MongoDB, Supabase (PostgreSQL), Firebase
- Cloud & DevOps: Docker, Vercel, Azure, AWS, Google Cloud, Git/GitHub, CI/CD
- APIs & Integrations: Stripe, Google Maps API, Google Gemini AI, LINE OA API, SEO Optimization
- Tools: Figma, Postman, Jira, Lucid, Cypress, Selenium

RELEVANT EXPERIENCE

May 2025 - Aug 2025 (4 Months)

Software Developer Intern : Royal Thai Armed Force Development Command

- Built and maintained the organization's official web platform with responsive design and dynamic content — independently, without a mentor.
- Engineered secure form components with input validation and deployed cloud storage infrastructure for internal records management.
- Monitored post-deployment performance and resolved production bugs to maintain uptime and data integrity.

FEATURED PROJECTS

AllCar Services — Full-Stack Car Marketplace Platform (2024)

(Next.js · TypeScript · Supabase · Google Maps API · Google Cloud · Tailwind CSS · Vercel · SEO)

- Architected and built a complete car marketplace from scratch solo — including buy/sell listings, real-time chat between users, and an admin approval workflow.
- Integrated Google Maps API to locate nearby repair shops with live reviews and shop details, enhancing service discoverability.
- Implemented SEO optimization and Vercel deployment, achieving production-ready performance for real-world handoff to a garage operator.
- Built a secure admin panel for content moderation, post approval, and news feed management.

QueueFlow — Real-Time Restaurant Queue Booking System (2024)

(Next.js · TypeScript · MySQL · Stripe · Docker · Vercel · WebSocket)

- Designed and developed a real-time queue management system with separate client and admin interfaces, supporting live slot synchronization across sessions.
- Integrated Stripe payment gateway for mandatory deposit-based bookings, implementing secure transaction flows end-to-end.
- Containerized the application with Docker and deployed via Vercel, building a full CI/CD-ready pipeline independently.
- Designed relational MySQL schemas to maintain live booking states with consistency under concurrent requests.

HealthyMate — AI-Powered Nutrition Web Application (2025)

(Next.js · TypeScript · Node.js · MongoDB · Google Gemini Flash 2.5 · Tailwind CSS)

- Built a full-stack AI web application enabling users to scan food images and instantly receive caloric and nutritional analysis powered by Google Gemini Flash 2.5.
- Developed backend API with Node.js and MongoDB, integrating AI vision endpoints with optimized image processing pipelines.
- Designed intuitive, accessible UI/UX flows with Tailwind CSS to maximize user engagement and ease of use.
- Deployed on Vercel with production-grade performance monitoring as the capstone project of the degree program.
